Ross – There is really no significant dependency on the web publishing with the 1.7 release, and the web publishing – once ready – will be done one night after hours. There was no way around the Gold King Mine matter. R8 has to have the system up over this weekend to respond to a variety of interests, all sounding more urgent than the one before it. I understand the importance of the web publishing effort and what is at stake. Lockheed has started work on the rather modest development required. I am more concerned that we will have little time to test as much as I would like and make any course corrections. I remain confident that we've got this under control.

The OU request makes sense, but I will have to get with Ramona and LM to see what can be done by when.

Let's catch-up next week. Steve

Steve, I'm hoping the delay with 1.7 won't affect LC's ability to deliver the semspub.epa.gov for Special Collections on August 31. ☺

A lot hinges on that product. I have confidence they can deliver, as Ramona seems to understand the requirements and that it is pretty straight forward being built on the AR version of the same tool and therefore isn't too much effort. I fully appreciate the PM adage "If you want me to finish on time, I can't start it now."

Here is a link the [Requirements](#) updated to reflect Region 10's request to include OU in the

results page. Ramona's discussion have suggested a slightly different approach in merging the AR and SC into the same application. This might be limited to the actual search interface at semspub.epa.gov. However, I think we cleared it up with her that a search interface for SC is not a priority. The priority is the Collection results page and the documents results page. The owner of the collection will know the URL and can create links to documents and collections without the search interface.

Of some urgency, we need to know the document and collection URL conventions sooner than later so that Drupal editors can start to hyperlink in the draft Drupal pages to the document and to the collections.

Thanks, Ross
